## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 9 is rejected under 35 U.S.C. 102(e) as being anticipated by Shankar et al.

Shankar et al. discloses an apparatus comprising a memory (i.e. fig. 2, 204) for storing data structure where the peer devices support DLSw RIF passthru functionality (i.e. col. 9, ll. 3-4; the switch functionat on a data link level and the RI is routed though the network); a processor (i.e. fig. 2, 202); and a network adapter for transmitting and receiving the message data structure to and from the WAN (i.e. fig. 2, 206 transmits and received messages)(col. 7, ll. 56-58, from the VTR which could be and IP network such as a WAN).

### *Allowable Subject Matter*

3. Claims 1-8 are allowed.

Art Unit: 2663

4. Claims 10-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

**Conclusion**

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Verma is cited to show a dynamic estimator for efficient transport of data on IP; and Periasamy et al. is cited to show a WAN using DLSw protocol with multiple routers.
